

#1

Stakeholder Interviews

Conversion UI Experts:

CUI users are campaign managers whose main task is to create and manage marketing campaigns for different channels. Besides managing the communication with the end customer, they also have to **create the voucher codes**. In this case, they interact with the CUI tool.

In the interviews, we learned more about the users and their roles, as well as the context of the problems they are experiencing during interaction with CUI. Pain points became more apparent to us.

During interviews we spoke to DE and CA teams. It is expected more teams are affected by issues addressed in this case.

#2

Key user journeys & Intended outcomes

User journey: CRM Campaign Manager

Task: Create online voucher campaign in CUI

Intended Outcome:
All the voucher codes are successfully created for CRM campaign

User journey: Partnership Marketing specialist

Task: Creating voucher codes for transferring campaigns

Intended Outcome:
All codes are successfully transferred from the US and recreated for the CA market.

#3

Problems vs. Opportunity areas

Problem statements

A campaign manager needs to create a voucher code for a campaign in the CUI tool. The code is not generated properly, leading to a failed campaign.

A campaign manager needs to create a voucher code for a campaign in the CUI tool. The code is not generated properly, leading to a failed campaign.

Opportunities

Adding a QR element and a QR code to the voucher code. This will allow users to scan the code and receive the discount. This will also allow users to track the code and see if it is being used.

#4

Cost impact factors

When user related problems occur, how much does this cost us?

Problem: Campaign manager needs to create a voucher code for a campaign in the CUI tool. The code is not generated properly, leading to a failed campaign. This costs the company \$10,000 USD annually spent for compensations.

If we were to fix UI challenges alone, what would the impact of this be?

Opportunity: Adding a QR element and a QR code to the voucher code. This will allow users to scan the code and receive the discount. This will also allow users to track the code and see if it is being used. This costs the company \$10,000 USD annually spent for compensations.

#5

Summary and Recommendations

Final statement and Summary

Issues to do with creating voucher codes for marketing campaigns is costing HelloFresh 6 million euro annually globally. This simply put, isn't something we can ignore any longer

Recommendations

- Moving forward we recommend to:
1. Close the gaps that currently prevent users from successfully completing their tasks, starting with eliminating error-prone conditions and helping users recover when errors occur.
 2. Create and validate a prototype of an improved version of the tool
 3. Implement the Enterprise Design System
 4. Prepare an implementation roadmap
 5. Continuously discover remaining opportunities for improvements related to the needs of the global marketing teams

#6

Potential phase by phase approach

Who would we need to get on board?

Based on evaluation of current status for the execution of the project we would ideally need to have all:

- Product Manager
- Product Designer
- Product Developer
- Product Tester
- Product Analyst
- Product Support
- Product Marketing
- Product Sales
- Product Finance
- Product Legal
- Product Compliance
- Product Security
- Product Operations
- Product Infrastructure
- Product Data
- Product Analytics
- Product Research
- Product Innovation
- Product Strategy
- Product Vision
- Product Mission
- Product Values
- Product Principles
- Product Standards
- Product Guidelines
- Product Templates
- Product Frameworks
- Product Processes
- Product Procedures
- Product Policies
- Product Rules
- Product Regulations
- Product Laws
- Product Ethics
- Product Morals
- Product Virtues
- Product Vices
- Product Habits
- Product Customs
- Product Traditions
- Product Rituals
- Product Ceremonies
- Product Festivals
- Product Holidays
- Product Seasons
- Product Months
- Product Weeks
- Product Days
- Product Hours
- Product Minutes
- Product Seconds
- Product Nanoseconds
- Product Picoseconds
- Product Femtoseconds
- Product Attoseconds
- Product Zeptoseconds
- Product Yoctoseconds
- Product Xenonseconds
- Product Planckseconds
- Product Super Planckseconds
- Product Sub Planckseconds
- Product Pre Planckseconds
- Product Post Planckseconds
- Product Super Planckseconds
- Product Sub Planckseconds
- Product Pre Planckseconds
- Product Post Planckseconds
